

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A computer-implemented method for updating a cellular site information database comprising cell site data, the method comprising ~~the steps of:~~

receiving a field input wherein the field input identifies a field type in the cellular site information database that is to be modified;

generating a skeleton script by searching a lookup table to find a skeleton script associated with the field type, wherein the skeleton script comprises a plurality of line commands to modify the field type identified by the field input;

~~receiving at least one device value and at least one field value~~ an input file comprising at least one device value and at least one field value identifying the cell site data to be modified;

populating the skeleton script with the at least one device value and the at least one field value to generate a script; and

executing the script to update the cellular site information database.

2. (Original) The method of claim 1 wherein the field input is input by a user.

3. (Original) The method of claim 1 wherein the cellular site information database is an Ericsson database.

4. (Cancelled).

5. (Cancelled).

6. (Original) The method of claim 1 wherein the device value identifies the device that is to be changed and the field value identifies what the value of the field type for the device is to be changed to.

7. (Currently Amended) The method of claim 1 wherein ~~the step of~~ executing the script to update the cellular site information database comprises running ~~the~~ a command handler application program to update the cellular site information database.

8. (Original) The method of claim 7 wherein the command handler application is operated in conjunction with a cellular site operating system.

9. (Original) The method of claim 8 wherein the cell site operating system is an Ericsson Operation & Support System (OSS).

10. (Currently Amended) A computer-readable medium comprising computer-readable instructions which, when executed, are operable to perform the ~~steps~~ method of claim 1.

11. (Currently Amended) A computer-implemented method for updating a form of a cellular site information database of a cellular system, the method comprising ~~the steps of:~~

receiving a field input wherein the field input identifies a field type in the form that is to be modified;

locating a skeleton script by searching a lookup table to find a skeleton script associated with the field type, wherein the skeleton script comprises a plurality of line commands to modify the field type identified by the field input;

~~receiving at least one device value and at least one field value, an input file comprising at least one device value and at least one field value~~ wherein the device value identifies a device and the field value identifies a value for the field type for a form associated with the device;

populating the skeleton script with the at least one device value and the at least one field value to generate a script; and

executing the script to update the cellular site information database.

12. (Currently Amended) The method of claim 11 wherein ~~the step of~~ executing the script to update the cellular site database comprises modifying an existing value of the field type in the form to be modified to be equal to the field value.

13. (Original) The method of claim 12 wherein the form to be modified comprises a form associated with the device identified by the device value.

14. (Currently Amended) A computer-readable medium comprising computer-readable instructions which, when executed, are operable to perform the ~~steps~~ method of claim 11.
